Vacations For You – Technical Details and Questions 1
Questions: 1
PartnerX API Endpoint Information 3
1) Get Reservation Info: 3
2) Get Property Info: 6
3) Get Property Amenities: 10
4) Get PropertyCustomFields: 11

Questions:

1) How do we get the Token Key and Token Secret? From the docs it appears that it expires. The duration is not clearly mentioned. If it expires quickly under 1 hour then we need a way to get a new token programmatically to call the endpoint whenever it expires. Read-only access is good enough for us as we would just fetch reservation and property information.

   Also, by using these endpoints, we would be able to access the production customer data. Is this ok? If not, we can use the mock data for few reservations and properties that you provide.

2) What are the unique group name classifications available in Amenities. Is there a standard pattern that you use when adding a new property in the system?

```
<amenity_show_on_website>yes</amenity_show_on_website>

    <amenity_show_on_website>yes</amenity_show_on_website>
</amenity>
```

Notes:

For answering property questions I think we need to call GetPropertyInfo, GetPropertyAmenities and GetPropertyCustomFields endpoints. From the Docs, GetPropertyInfoWordPress endpoint contains Amenities details embedded in it which doesn't have JSON support. If we would like to retrieve Amenities in Json content then we need to call GetPropertyAmenities endpoint separately.

3) In the previous call, it was said that one of your Teammate has a file with all the policies information. If you can share it with us, it would be helpful in adding to the knowledgebase of chatbot.

4) Does chatbot answer only to the existing customers who have already booked or does it answer generic questions for new customers too? The initial project document says only the former, but we would like to double check and confirm.

   Sample Greeting if we want to serve existing customers only :

   > "Hi this is VacationsForYou Chatbot. Could you share me your reservationId and LastName to better serve you"
   >
   > Expectation: The user shares reservationID and Last Name that will allow us to call APIs GetReservationInfo and GetPropertyInfo Endpoints to form a context before answering users questions.

5) Are you expecting to store the chatbot conversations? We would be adding the logs in the code, but we might not store the conversations in Database? Is this acceptable?

6) In the Initial Project Documents 'Problem Statement' you have mentioned about "Inconsistent responses across agents" and "Reduced guest satisfaction for routine inquiries". After going through the document again it made me curious about it. What were the inconsistencies between responses like. Was it a common policy or was it because the policies were different based on the Region and Property? Also, an example of reduced guest satisfaction would help us understand the current problem better before we implement the solution.

PartnerX API Endpoint Information

1) Get Reservation Info:

https://partner.streamlinevrs.com/apidocs/api-group/reservations/GetReservationInfo

Notes: From docs it appears we need to use this endpoint to fetch the Reservation Details. Only Status=4(Booked) and Status=7(Modified) seems to have an active confirmed reservation. *(Open for correction)*

To call this Endpoint we need confirmation_id. I'm not sure what this confirmation_id is. Below this we can see reservation_id. The docs say reservation_id is an alternative but the required column marks confirmation_id as mandatory field. I'm not sure if we need both confirmation_id and reservation_id from the Enduser for this to work? [*Need more information on what confirmation_id is. If this will be provided by the enduser? Also note that this field could be a duplicate. 2 companies can have same confirmation_id*]

GetReservationInfo

Returns information about a specific reservation, Folio Item add-ons, payments, commission information, etc. Possible reservation status_id's you will see: 1=Not Completed, 3=Attempt To Charge But Not Available, 4=Booked, 5=Closed/Checked-out, 6=Deleted, 7=Modified, 8=Cancelled, 9=Non Blocked Request, 10=Blocked Request, 12=No-Shows, 13=Quote Sent, 99=BPen

Name	Data Type	Description	Required?
token_key	String (255)	The expiring token key credential provided to you by Streamline	Yes
token_secret	String (255)	The expiring token secret credential provided to you by Streamline	Yes
confirmation_id	Number	The confirmation_id is used to lookup a reservation. It is unique per company. Two companies can have the same confirmation_id. Alternatively, you can use reservation_id or hash.	Yes
reservation_id	Number	The reservation_id is used to lookup a reservation. It is an alternative to confirmation_id.	No

'Get Reservation Info' Request:

Request Example

XML JSON

```
{
    "methodName": "GetReservationInfo",
    "params": {
        "token_key": "d5f834dbfb09d743b601e2ae534cc2a4",
        "token_secret": "d9d72cddfc270e112f7cf208f142af982bcc7317",

        "commissioned_agent_name": null,
        "travelagent_name": null
      }
    }
  }
}
```

We are intrested in status=4 (Booked) and 7(Modified)

2) Get Property Info:

https://partner.streamlinevrs.com/apidocs/api-group/property_information/GetPropertyInfo

GetPropertyInfo

Returns almost all fields with information describing the listing. This method is used for building listings.

Name	Data Type	Description	Required?
token_key	String (255)	The expiring token key credential provided to you by Streamline	Yes
token_secret	String (255)	The expiring token secret credential provided to you by Streamline	Yes
unit_id	Number	The unique ID for the home you are making a reservation or getting information from. Property ID values are also accepted in this parameter.	Yes
return_multiple_housekeepers	Boolean	Populates all housekeepers associated with a property. If there are multiple, returns a list of ID's separated by commas. If the parameter isn't used, housekeeping_processor_id will return null.	No
include_owners	Boolean	Returns owner information on the property.	No

From the GetReservationInfo response if the Status is 4 or 7 (Active or Modified) we will pick the unit_id and proceed to call Get Property Info Endpoint.

Get Property Info Request:

XML JSON

```
{
    "methodName": "GetPropertyInfo",
    "params": {

3) Get Property Amenities:

https://partner.streamlinevrs.com/apidocs/api-group/property_information/GetPropertyAmenities

GetPropertyAmenities

Return the specific amenities defined for a unit within Streamline.

Name	Data Type	Description	Required?
token_key	String (255)	The expiring token key credential provided to you by Streamline	Yes
token_secret	String (255)	The expiring token secret credential provided to you by Streamline	Yes
unit_id	Number	The unique ID for the home you are making a reservation or getting information from.	Yes

Request Example

XML JSON

```
{
    "methodName": "GetPropertyAmenities",
    "params": {
        "token_key": "d5f834dbfb09d743b601e2ae534cc2a4",
        "token_secret": "d9d72cddfc270e112f7cf208f142af982bcc7317",
        "unit_id": ""
    }
}
```

```

        }
      ]
    }
```

4) Get PropertyCustomFields:

https://partner.streamlinevrs.com/apidocs/api-group/property_information/GetPropertyCustomFields

GetPropertyCustomFields

Returns anything filled in to the "Additional Property Fields" on a listing.

Name	Data Type	Description	Required?
token_key	String (255)	The expiring token key credential provided to you by Streamline	Yes
token_secret	String (255)	The expiring token secret credential provided to you by Streamline	Yes
unit_id	Number	The unique ID for the home you are making a reservation or getting information from.	Yes
app_id	Number	unit id [value = guest, maintenance, housekeeping, owner]	No

Request Example

XML JSON

```
{
    "methodName": "GetPropertyCustomFields",
    "params": {
        "token_key": "d5f834dbfb09d743b601e2ae534cc2a4",
        "token_secret": "d9d72cddfc270e112f7cf208f142af982bcc7317",
        "unit_id": 28253
    }
}
```

Response Example

XML JSON

```
{
  "Response": {
    "data": {
      "field": [
        {
          "field_id": "270",
